

## Incremental Model

- Slight modification to waterfall model

↳ Better utilization of resources

- Divided into smaller subsections
- Multiple run of SDLC performed (smaller so faster)
- Building overall solution in parts
- Teams can work parallel on different builds (no waste of resource)

## When to use incremental model

- Requirements well defined (for incremental planning)
- Limited resource (need to break down into smaller cycle)
- Scope changes to some extent (undeveloped features can still be tweaked)

## Pros of Incremental model

- Initial build can demo to client  
↳ feedback possible
- Slight scope adjustment possible
- Errors can be identified early

## Cons of Incremental model

- Late customer review for final product
- rework required if scope changes esp. if work already started
