## Waterfall Model

- · first, oldest model
- · uses the SDLC phases as is (no modification)

Planning >

Requirements >

Software

· Linear, sequential model design

design 3) softmare

· if previous phase not

implementato >

completed, next phase cannot begin

Testing Deproyment J

When to usc

Maintenance L updates

· Requirements are clear & fixed

Lgovt. projects

- · App not complicated & Big
- · Project is short duration
- · Frough Resource to execute every stage when needed
- · Mission critical projects: Every step must be verified & approved

  Lhow tolerance for bugs

eg:

- · F-commerce supply chain app
- · payment gateway
- · Plight control system
- · Stock Trading app

## Pros of materfall

- · Simple & casy to implement (sequential)
- · casy to manage
- · phases completed sequentially
- · scope is fixed (no sudden changes)
- · clearly defined stages / books
- · Good visibility on proj. progress
- · Process essily clocumented

## cons of waterfell

· No working software at early stages. (customer only see near end of life cycle)

L No Myp concept

- · Under utilization of resources

  Leg. coders cannot start until

  earlier phases complete
- · unswitcher if requirements constanting updated
- · unsuitable for long term projects
  L requirements changes
- · No scupe change possible
